Two CYP82D Enzymes Function as Flavone Hydroxylases in the Biosynthesis of Root-Specific 4'-Deoxyflavones in *Scutellaria baicalensis*

Qing Zhao^{1,2,7}, Meng-Ying Cui^{1,7}, Olesya Levsh^{3,4}, Dongfeng Yang^{1,5}, Jie Liu¹, Jie Li², Lionel Hill², Lei Yang¹, Yonghong Hu¹, Jing-Ke Weng^{3,4}, Xiao-Ya Chen^{1,6} and Cathie Martin^{1,2,*}

F6H in basil + mint

F6H in soybean

Four candidates:

SbCYP82D2

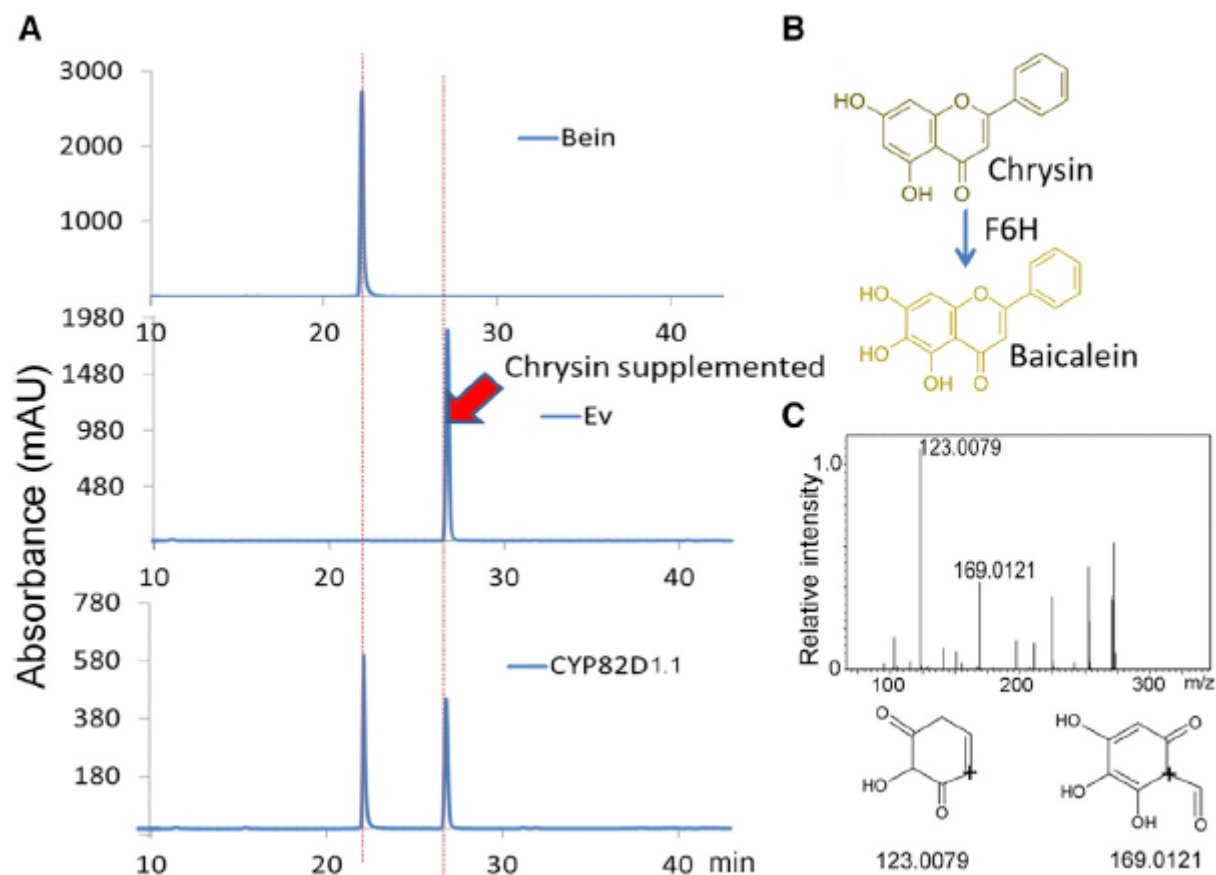

SbCYP82D1.1

SbCYP71D1

SbCYP71D2

Each transformed into yeast and fed with chrysin

Only yeast transformed with SbCYP82D1.1 produces baicalein

D

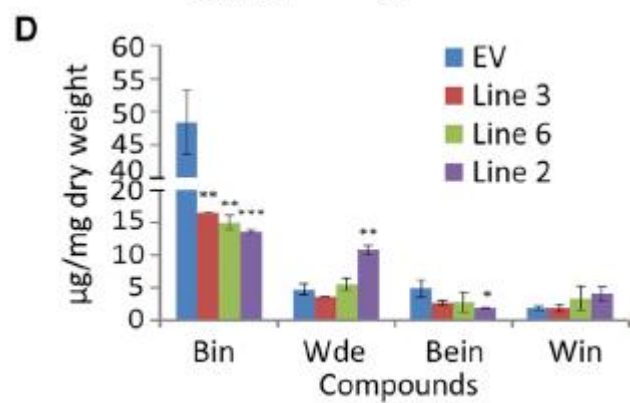

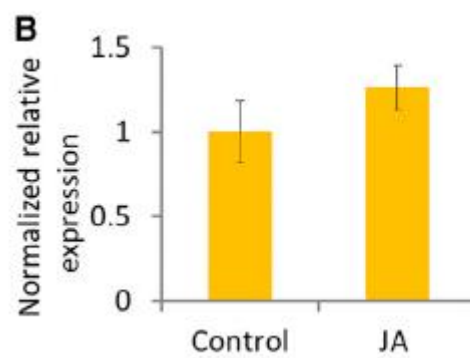

Enzyme	Substrate	K _m (μM)	V _{max} (pkar mg ⁻¹ protein)	V _{max} /K _m
SbCYP82D1.1	chrysin	0.121±0.002	733.047±10.014	6013.508

E

Substrates	Chr	Api	7-O-Mechr	Pin
SbCYP82D1.1a	100±0.54	90.43±1.95	85.85±1.52	ND
SbCYP82D1.1b	100±0.56	92.32±1.42	87.94±1.44	ND

^aSubstrates supplied at 5 μM; ^bSubstrates supplied at 2.5 μM; ND, not detectable.

RNAi silencing

Baicalin

Wogonoside

Baicalein

Wogonin

Qing Zhao^{1,2,7}, Meng-Ying Cui^{1,7}, Olesya Levsh^{3,4}, Dongfeng Yang^{1,5}, Jie Liu¹, Jie Li², Lionel Hill², Lei Yang¹, Yonghong Hu¹, Jing-Ke Weng^{3,4}, Xiao-Ya Chen^{1,6} and Cathie Martin^{1,2,*}

Overexpression in *Arabidopsis*

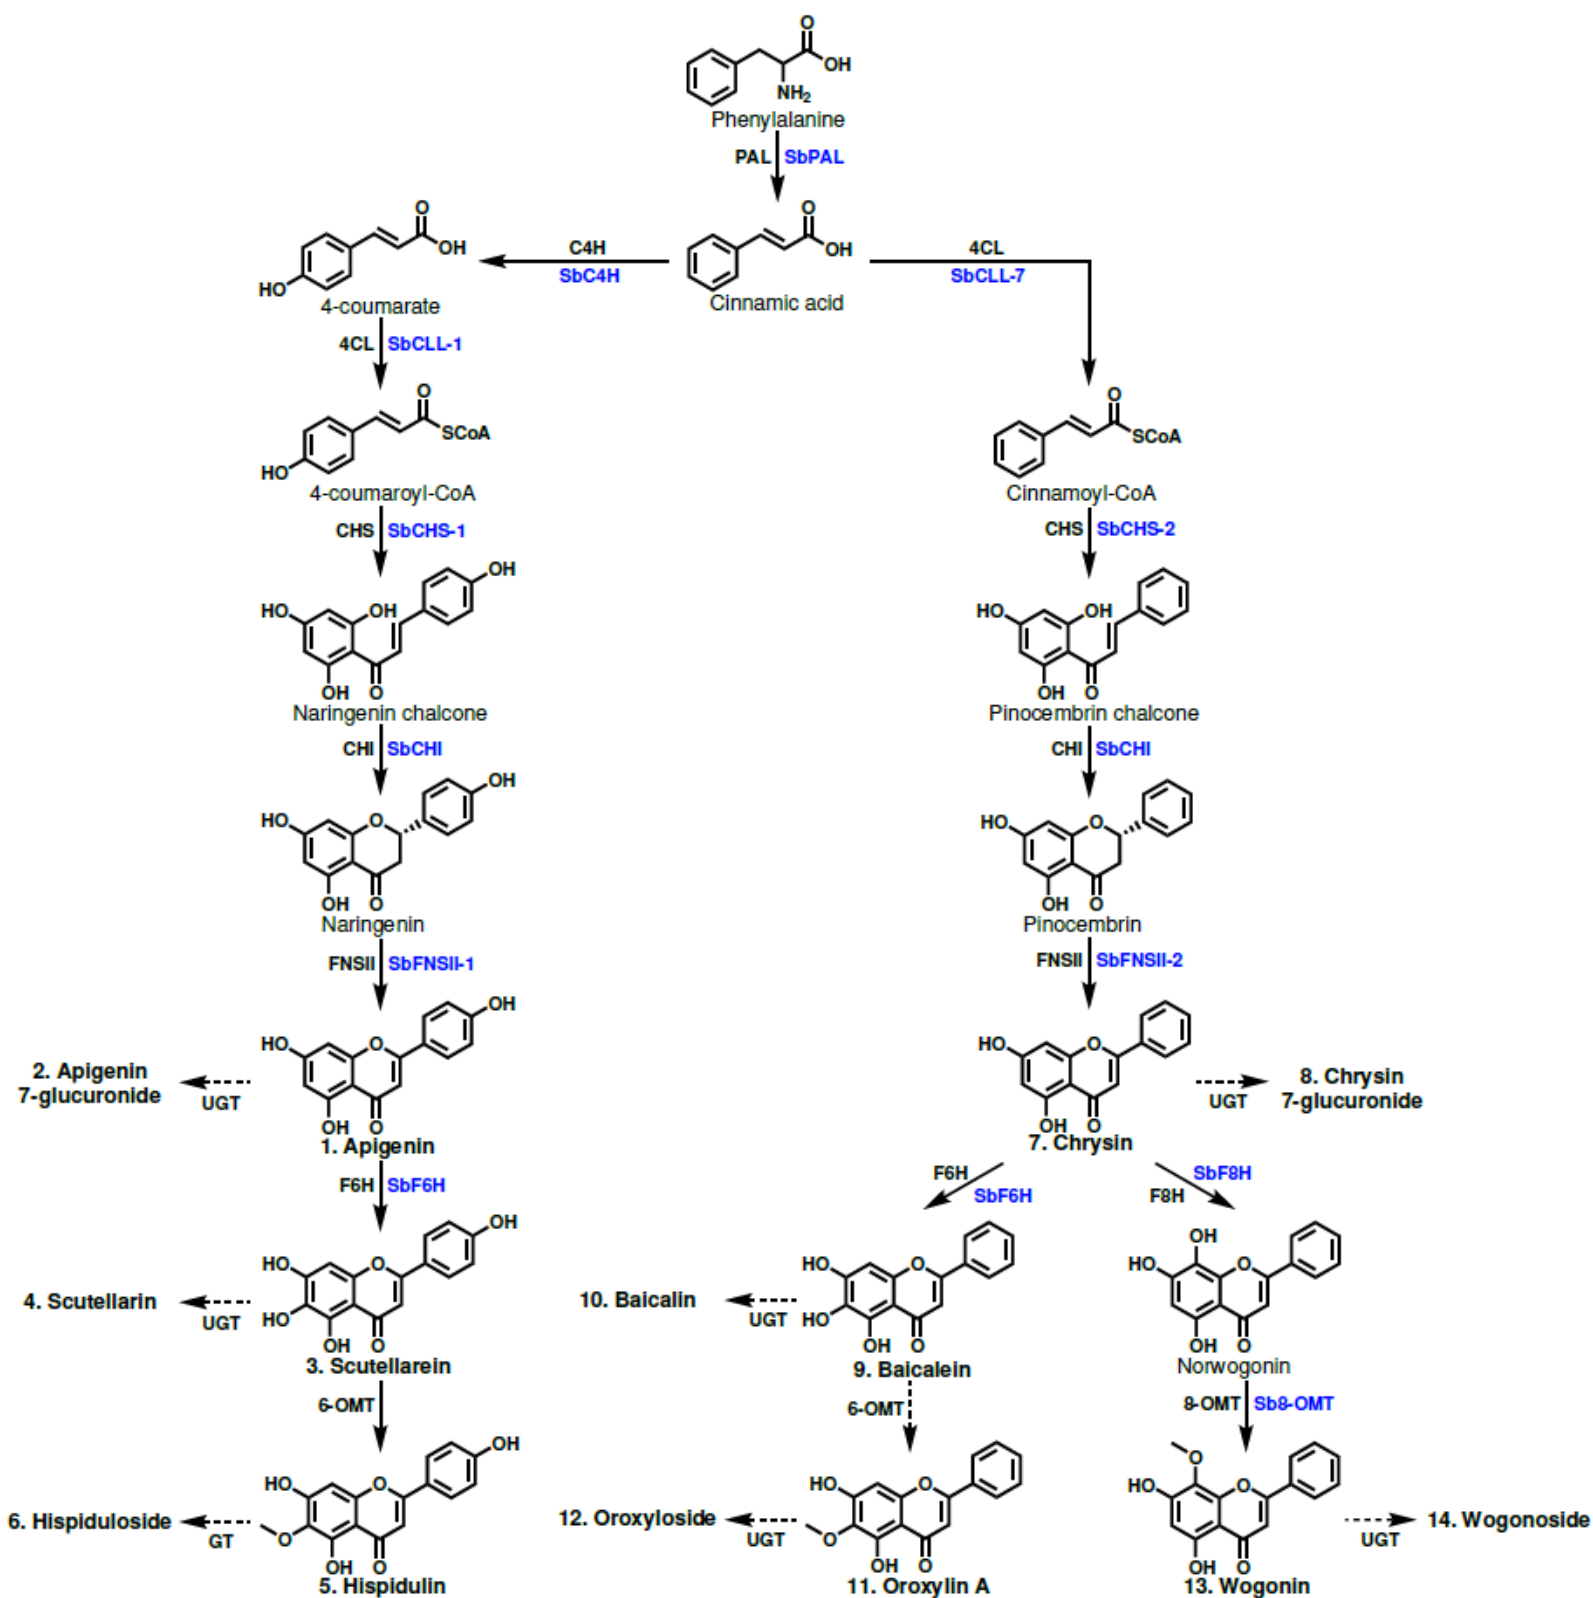

Figure 1. Proposed 4'-hydroxyflavone and 4'-deoxyflavone pathway. Structures of glycosylated metabolites are not shown to save space but are included in Appendix S1. Enzyme names in blue are specific isoforms that have been identified in *S. baicalensis*, and enzyme names in black are general names. Metabolites that were quantified have names in bold and are numbered to match the labeling of Figure 2.

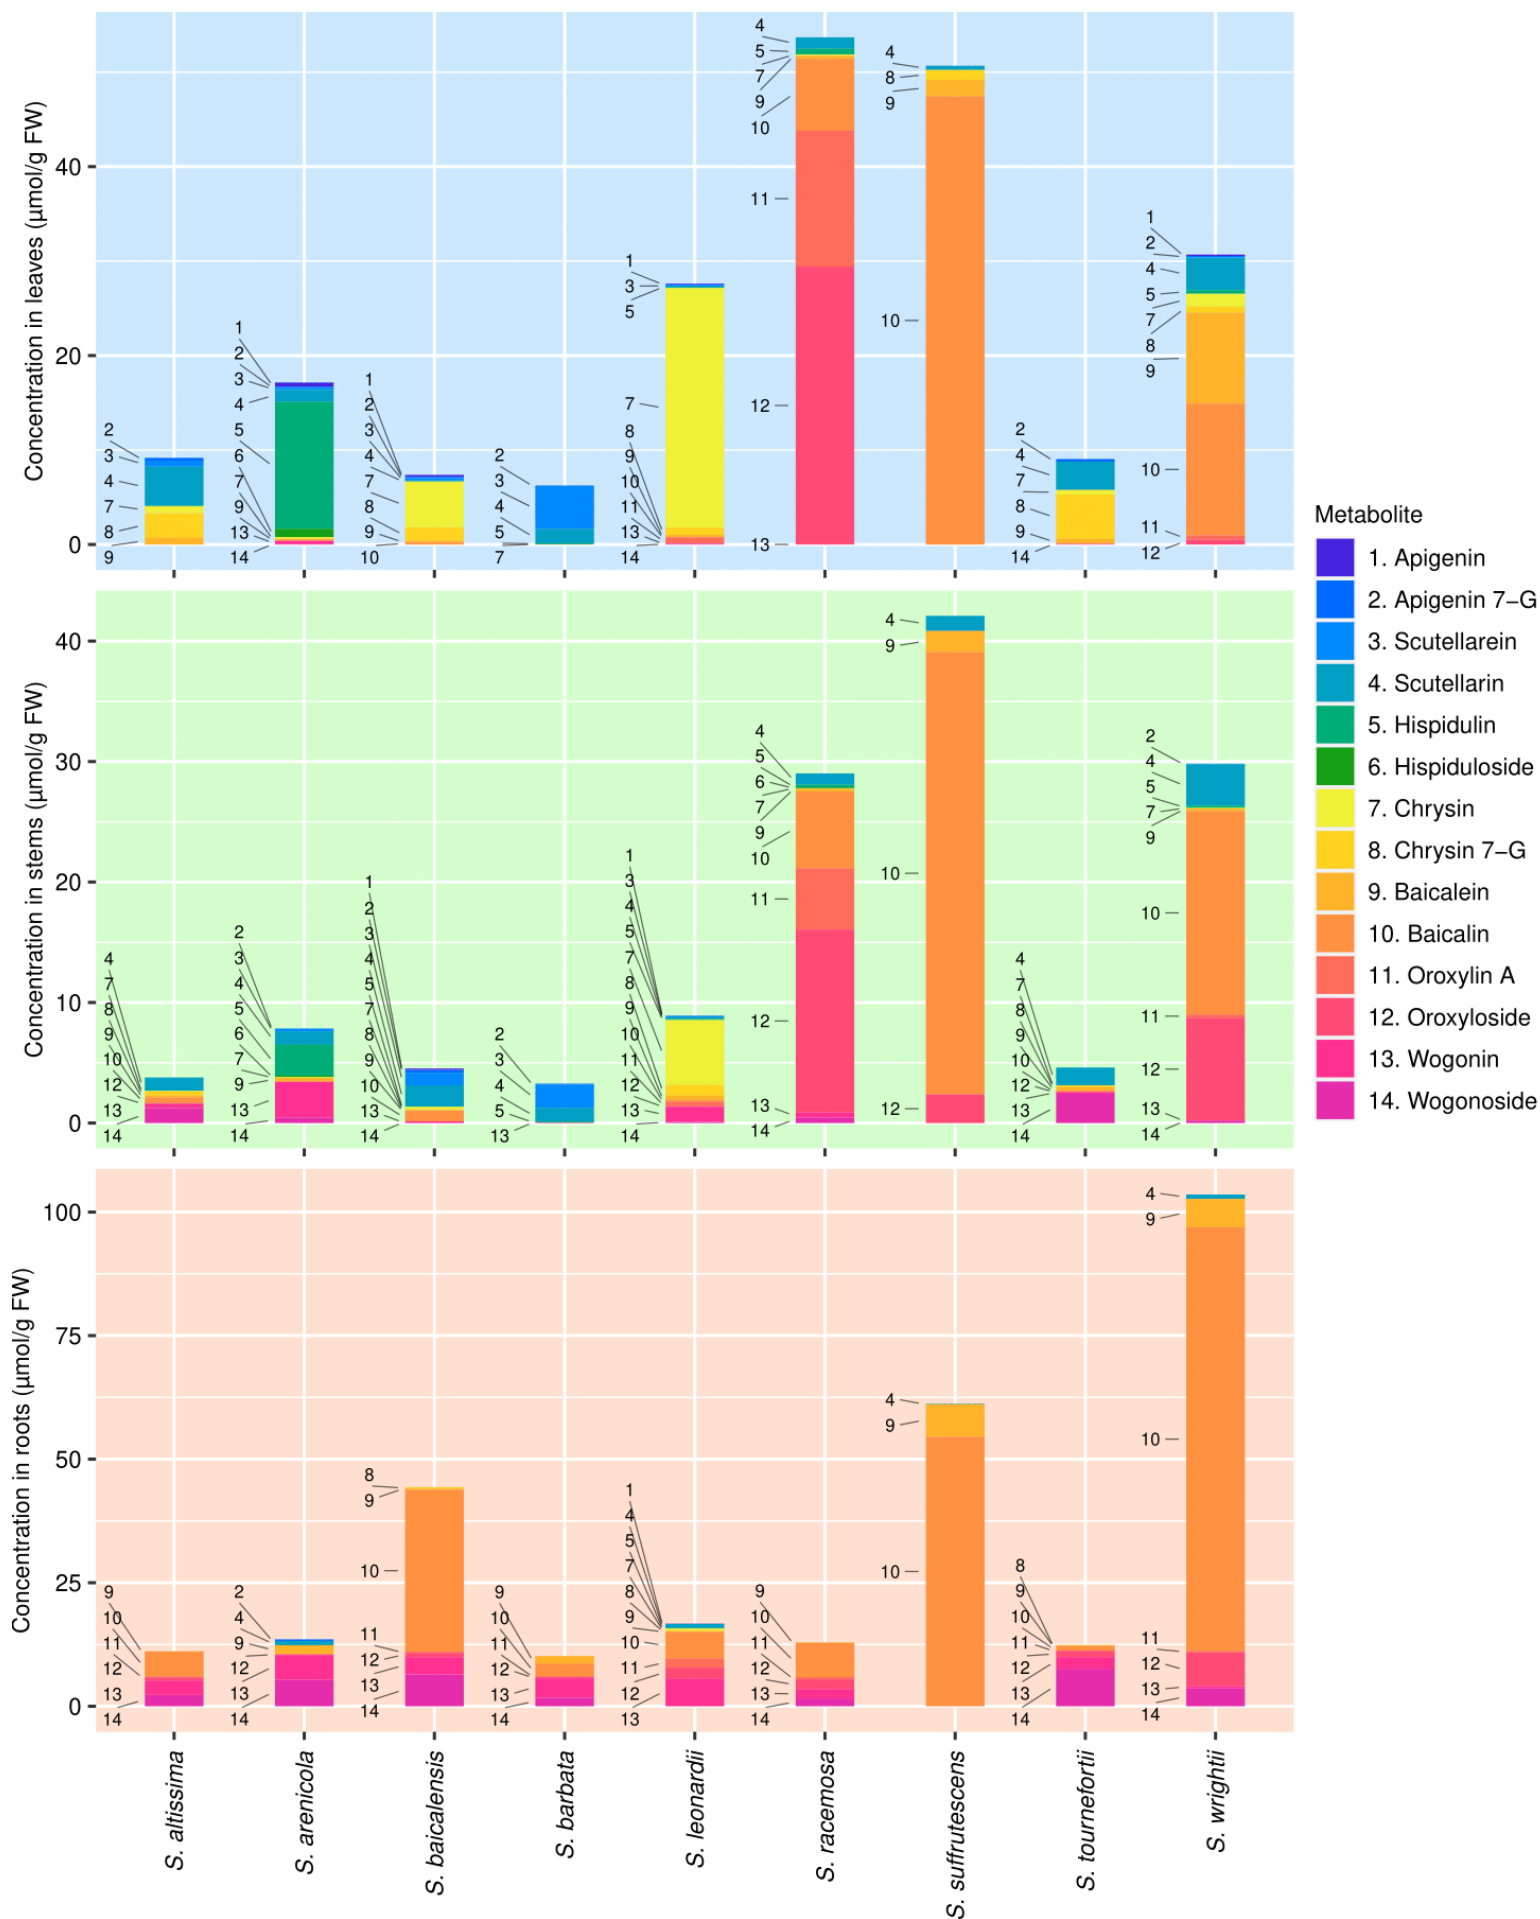

Figure 2. Organ-specific metabolite data collected from 9 *Scutellaria* species via High Performance Liquid Chromatography (HPLC). Samples were taken in biological triplicate, and the average concentration of each metabolite calculated. Metabolites are numbered to match their order of occurrence in the flavone pathway, shown in Figure 1.

Figure 3. Organ-specific oroxylin A (top) and oroxyloside (bottom) concentrations in 9 *Scutellaria* species, as determined via High Performance Liquid Chromatography (HPLC). Concentrations were averaged from tissue samples taken from 3 biological replicates, and error bars represent standard error.

S. baicalensis roots (Costine)

S. baicalensis leaves (Costine)

S. barbata leaves

S. racemosa leaves

Figure 4. Comparison of chromatograms collected via HPLC from (A) *S. baicalensis* roots, (B) *S. baicalensis* leaves, (C) *S. barbata* leaves, and (D) *S. racemosa* leaves. Time interval displayed was selected to center the unknown peak in the chromatograms.

Scutellarin

EIC

M/Z

MS/MS

Unknown

MS/MS

Figure 5. LC-MS + NMR data used to elucidate identity of unknown metabolite.

Predicted structure from NMR data:

Structure from PubChem: Isoscutellarein

Identity of unknown: Isoscutellarein 8-glucuronide

TODO:

Quantify isoscutellarein 8-glucuronide in all extractions

Apigenin feeding

Yeast activity test with Rieske-type oxygenase from *S. baicalensis*

Tobacco infiltration with RTO

Figure 6. Organ-specific isoscutellarein 8-glucuronide concentrations in 9 *Scutellaria* species, as determined via High Performance Liquid Chromatography (HPLC). Concentrations were averaged from tissue samples taken from 3 biological replicates, and error bars represent standard error.

Figure 7. *S. barbata* apigenin feeding results / Yeast activity test / *N. benthamiana* infiltration

Proposed pathway:

Figure 8. Proposed pathway for biosynthesis of isoscutellarein 8-glucuronide in *Scutellaria*.
